(Cell Stem Cell 12, 636–638; June 6, 2013)

Due to errors introduced in the Production process, our Preview incorrectly stated, “It will now be possible to evaluate how different reprogramming approaches affect developmental capacity, genetic stability, and graft survival by directly comparing SCNT, ESCs, and iPSCs derived from the same donor.” In fact, the line should have read, “It will now be possible to evaluate how different reprogramming approaches affect developmental capacity, genetic stability, and graft survival by directly comparing SCNT-ESCs and iPSCs derived from the same donor.” This has now been corrected in the article online.
